

Studio-in-a-box

For illustration purposes only

The Studio-in-a-box solution is ideal for full remote controllable HD studio productions and those looking to receive high quality broadcast streams from a contributor. Connecting to Quicklink's globally optimised low latency infrastructure, the Studio-in-a-box delivers bi-directional video/audio between the contributor and broadcaster when used with a Studio Server.

The Quicklink Manager will allow you to control your vision, lighting and sound from any web browser and the Studio Server will provide your inputs/outputs to air. The Studio-in-a-box requires only an internet connection and is a simple one button operation.

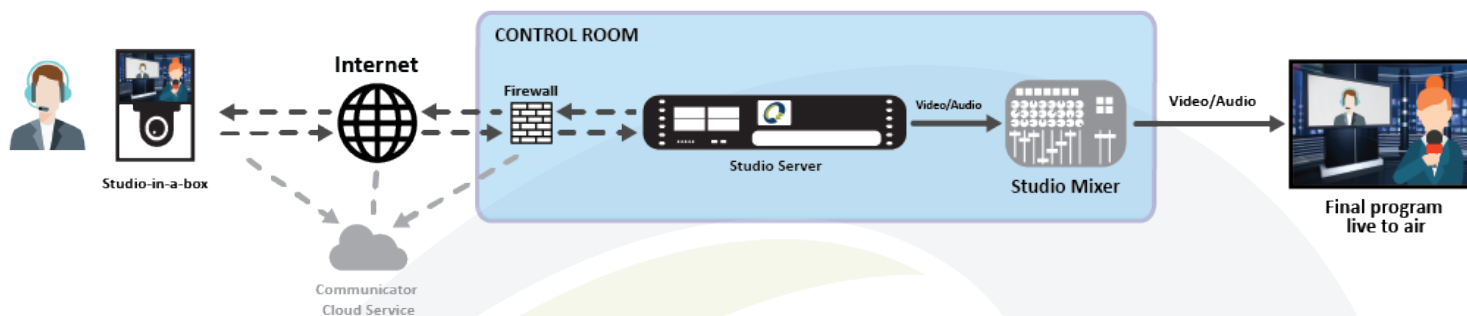

Product Highlights

- ▶ Inbuilt touchscreen 8.4" monitor to view local and studio output
- ▶ Inbuilt Panasonic pan/tilt/zoom camera (optional)
- ▶ Full remote camera image adjustment
- ▶ Full 1080p
- ▶ Full duplex audio/video with ultra-low latency
- ▶ Full audio metering and level control
- ▶ Remote IFB
- ▶ Supports secondary HDMI output monitor
- ▶ Teleprompter supported via NDI/SDI
- ▶ Inbuilt lighting with remote controllable brightness
- ▶ DMX-512 lighting remote control (x5)
- ▶ Secure globally optimised low latency network backbone
- ▶ Two-factor cloud based management portal
- ▶ Additional capacity to allow live streaming
- ▶ Rugged aluminium housing in a carry-on approved case

Everything you need in one compact solution, including Panasonic PTZ Camera, microphone, headset and carry case. For full HD productions, replacing the need for satellite or video circuits.

Fully control and manage your contributors quickly, easily and efficiently.
