Quicklink TX

skype™

The Quicklink TX is specially designed to meet the business requirements of anyone looking to produce live content. This bi-directional calling solution will allow you to connect to audiences at anytime from anywhere and can be used to both send or output calls using a professional SDI. Utilising the Skype global address book will provide unlimited access to multiple users from a web browser or mobile device. Our unlimited scalability ensures we provide as much capacity as needed, as often as needed from the choice of options available to suit all budgets.

Quicklink Control Panel

The Quicklink Control Panel will provide complete management and control of input and output settings for each individual caller.

Features of the Control Panel include: IFB Return Audio, Tally Light, Audio Properties, Colour Correction and call recording.
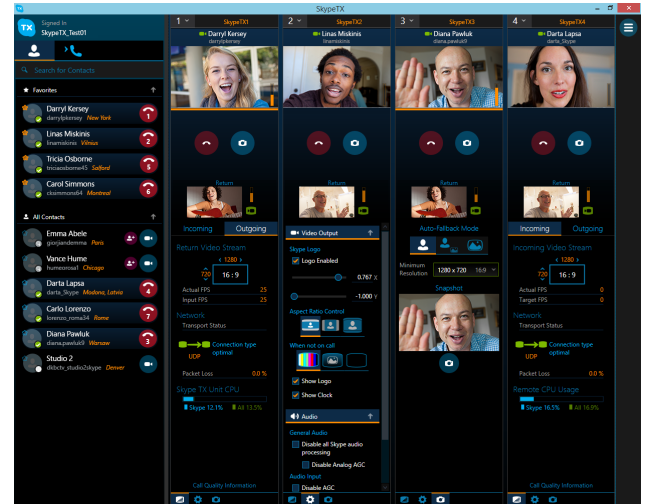

The Quicklink Control Panel can be installed on any PC/Laptop using the same local network connection as the TX unit.

Video Over IP Solutions

Skype TX Controller

The Skype TX Controller enables broadcasters and content producers to manage multiple Quicklink Skype TX units from a single user interface. The live inbound and outbound indicator monitors the audio and video quality of each caller.

The Skype TX Controller can be installed on any PC/Laptop using the same local network connection as the TX unit.

The Quicklink TX solutions are deployed globally and based on highly reliable hardware and software.

Our partnership with Microsoft ensures that the skills and technologies used match and exceed your expectations of what the solution can offer.
